

ALIVE

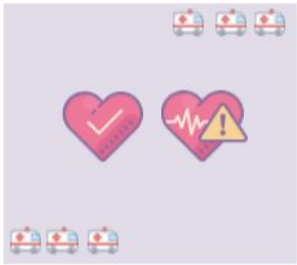

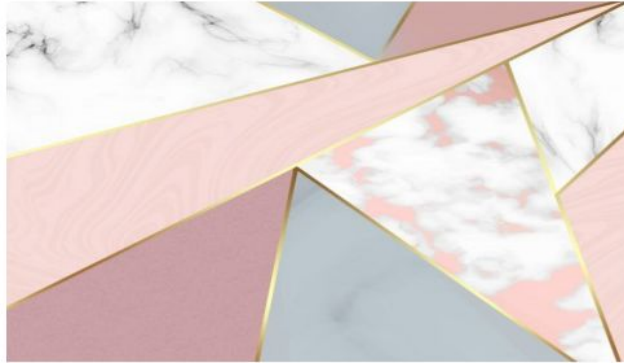

A handy application that lets users measure their heart rate with just a touch!

A heartbeat monitor in your pocket? Who would have thought? This smartphone app can sense your heartbeat through the fingerprint sensor available on your phone, and display your pulse-rate on the screen, along with other handy features like **forums** for discussions/queries, providing interesting facts about the heart, and even alerting the user of any irregularities. From kids, to adults, this app is for just about everyone!

Know your heart like the back of your hand!

ALIVE allows the user to measure their heart rate and helps them keep track of their cardiovascular health. They can also post queries on the discussion forum where our qualified team of doctors will answer them promptly. The simple and calming aesthetic of the app provides a homely environment where the users can feel safe.

				<div>Settings</div>	

Sketch

- ★ Please note that the dimensions seem a bit stretched out because I used an iPhoneX template but the given template is that of an iPhone8. (the quality of the picture has also reduced)
- ★ Also, I thought it was important to show the loading screen, hence I added an extra screen. Please don't mind :)
